

# SPRINGBOARD MATHEMATICS WITH MEANING GEOMETRY

## UNIT 1 ANSWERS TUTORIAL

### 1 Learning Targets:

- Construct a function to model a linear relationship between two quantities.
- Graph functions that model linear relationships.

**SUGGESTED LEARNING STRATEGIES:** Marking the Text, Sharing and Responding, Identify a Subtask, Look for a Pattern, Note Taking

My Notes

2

3 Buffalo Mountain holds three older turbines that are 213 feet tall and have blades that are 75 feet in length. Each of these older turbines generates 660 kilowatts of power per hour when they are producing their maximum amount of power.

There are newer, larger turbines as well that have a height of 260 feet with blades that are 135 feet long. Each of these newer turbines creates 1,800 kilowatts of power per hour.

1. Write a function to represent the amount of power generated by a newer turbine for  $x$  number of hours. Be sure to define the variables you use.  
 $y = 1,800x$ ,  $x$  = the number of hours, and  $y$  = the amount of power generated in kilowatt hours.

5 2. Reason abstractly. Explain why the function you wrote in Item 1 is directly proportional.

The equation is directly proportional because it is in the form of  $y = mx$ . It represents a constant rate of change of 1,800 kWh every hour and the  $y$ -value is 0 when the  $x$ -value is 0.

4

### CONNECT TO SCIENCE

Wind power is one of many types of power currently being used. There are wind turbines in sites across the globe.

### Check Your Understanding

6

12. How much more energy per year does one newer turbine generate
